

1) start-all.sh

this command is depreciated. However it still works and brings up hadoop

2) jps

displays 5 processes

1. Namenode
2. resourcemanager
3. datanode
4. secondary namenode
5. nodemanager

3) pwd, ls -lrt

displays results as expected

4) nano test.txt

- a. Created file ..saved Ctrl O
- b. Exited Ctrl X

5) Launch localhost:50070

Opened webpage

Provides memory details

Namenode Journal status

Namenode storage

Shows details of blocks and size used for test.txt file

Executed stop-all.sh

Stopped all services

Webpage did not open.
